EDUCATION

Cornell University (Cornell Tech)

New York, NY

Dual M.S., Information Systems and Applied Information Science, **Health Technology**; Merit Scholarship

Aug 2025 – May 2027

- Coursework: Healthcare Organization and Delivery, AI in Healthcare, Machine Learning for Health, Business Fundamentals.

NMIMS University, Mukesh Patel School of Technology Management and Engineering

Mumbai, India

B.Tech., Computer Engineering; GPA: 3.89/4.00 (US equivalent)

Aug 2020 – May 2024

EXPERIENCE

ZS Associates | life sciences and healthcare consultancy

Pune, India

Technology Solution Consulting Associate

Aug 2024 – Jun 2025

- Validated **territory assignment** and **incentive compensation** for **3,500 field representatives** at a US **pharmaceutical** manufacturer, reconciling **4 million transaction records** on AWS EMR against plan rules so every cycle paid out correctly nationwide.
- Cut the volume of payout discrepancies raised by **58%** by tracing them to territories whose quotas local market conditions made unreachable, then building a model that flagged those territories before the pay cycle closed rather than after they were disputed.
- Improved territory **forecast accuracy by 23%** with a **time series** model that detected when outside events distorted a territory's numbers, such as a hurricane closing the clinics a representative covers, and reset the targets to match.
- Rebuilt **600+ bonus rules** covering the qualitative goals representatives are measured on, carrying them through the migration onto a new payout calculation engine and validating each on a **600-person pilot** before release to the full sales force.

Montran Corporation | payments and financial market infrastructure

Mumbai, India

Technology Sales Intern (Presales)

Jan 2024 – Jun 2024

- Supported presales for a **central bank** and **3 public sector banks**, mapping each institution's existing payment infrastructure against product capability and scoping its migration to **ISO 20022**, the global standard for payment messaging.
- Built the case for decoupling payment processing from monolithic core banking systems, using a decade of growth from **5.6 to 147.6 billion transactions a year** to show where legacy architecture strains; the research underpinned a Montran article published in **Banking Frontiers**, May 2024.

IBM (Phemesoft Ltd.)

Mumbai, India

Python Intern

Jun 2023 – Jul 2023

- Surfaced **cross-selling opportunities** for the sales team by analysing which products customers tend to buy together across a large transaction dataset, and built the pipeline and **dashboards** that delivered it.

LEADERSHIP AND ACTIVITIES

- **General Secretary (Head of Student Body)**, NMIMS: Elected to lead campus-wide student representation for **1,800+ students**, serving as the student body's principal interface with administration.
- **President, Unmanned Aerial Systems Group**, NMIMS: Grew a student engineering team from **21 to 39 members** on an **INR 200,000** annual budget, winning at SVNIT Surat, placing third at a Boeing-sponsored competition, and representing the university at AUVSI.
- **President, "Saturday 10AM@NMIMS"**: Ran a weekly industry series for three semesters, **40+ sessions** drawing roughly **100 students** each, bringing senior practitioners onto campus to work through live problems.

RESEARCH AND PROJECTS

Autonomous 3D Inspection Platform | Cornell Matter of Tech Lab

Jan 2026 – Present

- Architecting a platform that turns guided drone capture of an asset into a **3D reconstruction** aligned to its **CAD model**, so a field operator and a remote expert work from the same evidence; leading consolidation of **five prototype codebases** into one architecture.

Measurement Reliability in Health Prediction | Cornell Tech

Spring 2026

- Showed that changing only the **outcome label**, a clinical depression diagnosis versus self-reported distress, moved a model's explanatory power **thirteenfold** across **2,777 US counties**, holding counties, features, and model identical.
- Traced the gap to the labels: **insurance coverage** tracked upward with diagnosed depression but downward with distress, indicating the diagnosis measure partly captures who can reach a doctor.

ADDITIONAL

- **Skills:** Excel modeling, PowerPoint, SQL, Python, cloud data processing, market research, stakeholder communication.
- **Publications:** [Sign Language Recognition and Detection: A Review](#), ICIVC 2023 (Springer, 2024), corresponding author; [Current Indian Car Market and EV Adaptation](#), IJRASET 2022.
- **Certifications:** AWS, IBM, PwC, Accenture, HP. **Interests:** Cooking, cycling, following geopolitics.
